ПРО СЕБЕ

Frontend / Full-Stack Developer with strong practical experience in building modern web applications using JavaScript (ES6+), TypeScript, React, and Node.js. I develop responsive, scalable, and maintainable user interfaces, focusing on clean architecture and performance optimization. During my training at Mate Academy and personal projects, I implemented reusable component systems, optimized rendering performance, and improved application load speed through efficient state management and API integration.

I hold a degree in Computer Engineering and am currently completing an intensive Full Stack program at Mate Academy. I have hands-on experience working with REST APIs, Redux Toolkit, PostgreSQL, and MongoDB. English level — Intermediate (B1).

ДОСВІД РОБОТИ

Self-employed - Україна, Київ

Front-End Developer

[01/01/2025 - 01/01/2026]

Designed and developed modern, responsive web applications using React, TypeScript, and Node.js. Delivered custom solutions including landing pages, dashboards, and health-tracking applications with authentication and API integration.

Optimized performance by improving component re-render logic and implementing efficient state management, resulting in smoother user experience and faster load times. Worked independently with clients, translating business requirements into scalable technical solutions while maintaining clean, maintainable codebases.

ОСВІТА ТА ПРОФЕСІЙНЕ НАВЧАННЯ

Computer Engineering

National Aviation University [01/09/2022 - 31/05/2026]

Місто: Київ | Країна: Україна

Сайт: <https://nau.edu.ua/> | Галузі навчання: Education: • Education science | Рівень у ЄРК: 6

МОВНІ УМІННЯ

Рідна мова: Українська

Англійська

SKILLS

implement front-end website design | HTML5 | CSS | SCSS | JavaScript | JS ES6 | TypeScript | JavaScript Framework | React | Vite | Redux-toolkit | Git | Node.js | REST API | Fetch | Express | Web sockets | MySQL | Sequelize | Material UI | web programming | write English | BEM | Git Webpack | Eslint | Prettier | Basic OOP understanding | understand spoken English

ПРОЄКТИ

[01/01/2025 - 01/03/2025]

iziBloomSchool Web site Main activities and responsibilities:

- Designed the overall visual identity of the project, including logo creation, color schemes, typography, and branding elements.
- Developed wireframes, mockups, and prototypes for the website layout, ensuring user-friendly navigation and responsive design.
- Implemented the frontend of the website using HTML5, CSS3, and JavaScript, following modern design principles.
- Coordinated the integration of a Telegram bot to enable automated user interactions and notifications.
- Ensured smooth collaboration between frontend design, backend development, and third-party API services.
- Tested and optimized the website for performance, accessibility, and cross-browser compatibility.
- Maintained project documentation and version control using Git, facilitating team collaboration and future updates.

[01/03/2025 - 10/03/2025]

MyBike A landing page about bicycles with an emphasis on visual appeal, modern aesthetics, and responsive design. The project was created to showcase the product through high-quality visual content, thoughtful typography, and a balanced color palette.

The page has a clear structure: a hero section with an emphasis on the key model, blocks with advantages, technical characteristics, and a call to action. Special attention is paid to UX — convenient navigation, smooth animations, and a logical content hierarchy ensure comfortable user interaction with the site.

The landing page is fully responsive and displays correctly on mobile devices, tablets, and desktops. It is implemented in pure HTML, CSS, and JavaScript without the use of frameworks, which emphasizes a deep understanding of basic web technologies and layout principles.

[01/04/2026 - 01/05/2026]

Welltrack – Personal health tracker A web service for tracking health status and receiving personalized recommendations. The platform allows users to create their own profile, keep a symptom diary, plan events in the built-in calendar, and receive reminders about important medical procedures or medication intake.

Users can store and organize medical documents, providing quick access to their examination history and test results. Integration with medical center services has been implemented for more convenient interaction and appointment scheduling.

The interface is focused on simplicity and ease of use, with an adaptive design for comfortable work on mobile devices, tablets, and desktops.

The project was developed using React and JavaScript, styled with CSS, and implemented a user authentication

system, health tracking logic, and responsive layout.

ADDITIONAL EDUCATION

[01/01/2025 - Поточні]

Full-Stack Developer Course

Gained hands-on experience building full-stack applications using React, TypeScript, Node.js, Express, PostgreSQL, and MongoDB. Worked on real-world projects, implemented REST APIs, state management with Redux Toolkit, authentication systems, and responsive UI development following best practices and clean architecture principles.
